WRITTEN OPINION OF THE  
INTERNATIONAL SEARCHING AUTHORITY

International application No.

PCT / JP2005/001751

Box No. I Basis of this opinion

1. With regard to the language, this opinion has been established on the basis of the international application in the language in which it was filed, unless otherwise indicated under this item.  
 This opinion has been established on the basis of a translation from the original language into the following language \_\_\_\_\_, which is the language of a translation furnished for the purposes of international search (under Rule 12.3 and 23.1(b)).
2. With regard to any nucleotide and/or amino acid sequence disclosed in the international application and necessary to the claimed invention, this opinion has been established on the basis of:
  - a. type of material
    - a sequence listing
    - table(s) related to the sequence listing
  - b. format of material
    - in written format
    - in computer readable form
  - c. time of filing/furnishing
    - contained in the international application as filed.
    - filed together with the international application in computer readable form.
    - furnished subsequently to this Authority for the purposes of search.
3.  In addition, in the case that more than one version or copy of a sequence listing and/or table(s) relating thereto has been filed or furnished, the required statements that the information in the subsequent or additional copies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.

Document 3: JP 2001-305335 A (Sumitomo Chemical Co., Ltd.), 31 October 2001, Full text, all drawings		
<b>Claims 1-6</b>		
The inventions of claims 1-6 do not appear to involve an inventive step based on document 1-3 cited in the ISR.		
Document 1 (in particular, Par. Nos. 0020, 0022, 0035-0036, 0062) describes a backlight device for a liquid-crystal display comprising a light scattering plate in which methyl methacrylate and styrene are combined at a weight ratio of 30 : 70 – 70 : 30.		
Document 2 (in particular, Par. Nos. 0030-0032) describes a backlight device for a liquid-crystal display comprising a light scattering plate from a material with low hygroscopicity.		
Document 3 (in particular Par. Nos. 0009-0012, 0018) describes a backlight device for a liquid-crystal display comprising a light scattering plate comprising a combination of methyl methacrylate and styrene and a UV absorbing agent.		
Here, according to Fig. 2 of the present application, the light scattering plate of the invention described in document 1 apparently satisfies the relationship between the saturation hygroscopicity and color difference of the invention described in claim 1.		
Furthermore, creating the invention described in claim 1 by introducing a UV absorbing agent and reducing the color difference as in the invention described in document 3 by using a material with a low saturation hygroscopicity could have easily been conceived of by a person skilled in the art.		
With respect to the invention described in claim 4, document 3 (in particular Par. No. 0027) can be referred to, and with respect to the inventions described in claims 5-6, a reference can be made to using a cold cathode tube of a high-brightness type as a light source in the invention described in document 3 (in particular Par. No. 0004).
